Uriah Powell, Aagam Shah, Simon Denny, Dan Phan

October 1, 2026

INFO I101

Mirizio, Paul

Contributor

Lynn Conway

Lynn was underrepresented in the world of technology and computing as she was discriminated against and undermined by her ability to succeed due to her transitioning gender identity throughout college academia and as well in her former career at IBM (Britannica). Although Lynn was enrolled at MIT, she decided to drop out due to the Dean being worried that her gender transition would be a concern, so Lynn later enrolled at Columbia University to then receive her bachelor's and master's degree in electrical engineering (Britannica). After graduation, Lynn worked for IBM, to which she contributed much work for them, but she was later fired after successfully pursuing gender transition; however, Lynn later worked at Xerox Palo Alto Research Center, which she also contributed heavily to the world of technology (Britannica). At IBM, Lynn invented dynamic instruction scheduling, which allowed computers to execute many instructions at the same time; Lynn also simplified the production of computer chips by redesigning the chip layout at Xerox (Britannica).

The reason why we decided to go along with Lynn Conway was because of her fundamental contributions to how computers work and as well as her simplification of computer chip production, which is a major step to how computers are the way they are today. Other options included other great contributors to the world of computing, informatics, and technology such as Margaret Hamilton,

Katherine Johnson, and Joy Buolamwini. If we had not chosen Lynn Conway, our runner-up contributor would have been Chieko Asakawa.

Timeline

Project Name	Due Date	Project Coordinator	Plan
Project Charter	Oct 4, 2026	Uriah Powell	The team will share individual contributions to the work on October 2. The team will discuss these during a meeting on October 2. The group will give feedback by October 2. Uriah will submit the group assignment on October 2.
Project Research	Oct 18, 2026	Aagam Shah	The team will share individual contributions to the work on October 15. The team will discuss these during a meeting on October 16. The group will give feedback by October 17. Aagam will submit the group assignment on October 18.
Project Website Wireframe	Oct 25, 2026	Dan Phan	The team will share individual contributions to the work on October 22. The team will discuss these during a meeting on October 23. The group will give feedback by October 24. Dan will submit the group assignment on October 25.
Project Website Draft	Nov 8, 2026	Simon Denny	The team will share individual contributions

			to the work on November 5. The team will discuss these during a meeting on November 6. The group will give feedback by November 7. Simon will submit the group assignment on November 8.
Project Website Feedback	Nov 15, 2026	Uriah Powell	The team will share individual contributions to the work on November 12. The team will discuss these during a meeting on November 13. The group will give feedback by November 14. Uriah will submit the group assignment on November 15.
Project Data Viz	Nov 22, 2026	Aagam Shah	The team will share individual contributions to the work on November 19. The team will discuss these during a meeting on November 20. The group will give feedback by November 21. Aagam will submit the group assignment on November 22.
Project Final Website	Dec 6, 2026	Dan Phan	The team will share individual contributions to the work on December 3. The team will discuss these during a meeting on December 4. The group will give feedback by December 5. Dan will submit the group

			assignment on December 6.
Project Final Presentation (Submission)	Dec 6, 2026	Simon Denny	The team will share individual contributions to the work on December 3. The team will discuss these during a meeting on December 4. The group will give feedback by December 5. Simon will submit the group assignment on December 6.
Final Presentation in Lab	No date given	Uriah Powell	The team will work together to present their final presentation on the day of.

Management Plan

Communication Channel

- Text

Meeting Invites

- Zoom at 2pm on fridays

Collaboration space:

- Zoom

Team coordinator:

- Uriah

All Milestones:

- Coordinator: Switch between us four. Internal checkpoint: Check to see if we are halfway done with this part of the project. Planned submission date: Day of assignment due. Two foreseeable risks: Someone is sick or the Wi-Fi goes out. If someone is sick, they can either work on their part

of the project from home or remaining team members will work to complete the sick member's part of the project. Another foreseeable risk is that the Wi-Fi goes out for all of us. If this happens, we will try to use our hotspot's from our phones and connect to our laptops to continue working on the project. If that is not possible, we will wait until the Wi-Fi returns for all of us. Standing time for meeting face-to-face: During regularly scheduled labs for this class.

Exposures

Someone gets sick: If possible, they can work from home with their part of the project. If not, remaining team members will work together to complete the sick member's part of the project.

The Wi-Fi goes out for everybody working on the project: We will use our hotspot's from our phones if available to try to work on our computers. If not, we will work on the project whenever we get Wi-Fi back and running.
